MYMENU · ASKING FOR AED 250,000

Talabat didn't cook the food. It still takes the biggest cut.

A 60 dirham meal. The restaurant keeps 42.
I change that for 300 dirhams a month.

SAY THIS · 30 SECONDS

"Talabat did not buy the meat. It did not cook the food. It did not wash a single plate. And out of every order, it takes the biggest cut of anybody."

"A customer pays 60 dirhams for a meal. The restaurant keeps 42."

"My name is [your name]. I built MyMenu, and I change that number for 300 dirhams a month."

Stop after "the biggest cut of anybody". Give it two seconds before you say the numbers.

THE PROBLEM

18 dirhams, for taking the order.

AED 18 to the app	**AED 42 to the restaurant**

Talabat takes 15 to 30 percent. Deliveroo takes 25 to 35 percent. And that is before the extra fees they add on top.

SAY THIS · 40 SECONDS

"Here is what happens when a customer buys a 60 dirham meal through a delivery app."

"The app takes 18 dirhams. The restaurant — who bought the food, cooked it, and packed it — keeps 42."

"Talabat takes 15 to 30 percent. Deliveroo takes 25 to 35. And there are extra fees on top of that."

Point at the red part of the bar when you say 18.

THE PROBLEM

Over a year, that is 90,000 dirhams.

30,000	7,500	90,000
What a small restaurant sells through the apps each month	What the app takes, every month	Gone in one year

And after paying all of that, the restaurant still does not know one customer's name or phone number.

SAY THIS · 40 SECONDS

"A small restaurant sells about 30,000 dirhams a month through the apps. At 25 percent, that is 7,500 dirhams gone every month."

"In one year, that is 90,000 dirhams."

"And here is the part that hurts more. After paying 90,000 dirhams, the restaurant still does not have one customer's phone number. If they want that customer back next week, they pay the app again."

"They are renting their own customers."

WHO THIS IS FOR

Not every restaurant. This man, in this street.

THE ONE WHO PAYS · MY CUSTOMER

The owner of a one-branch cafeteria.

30 to 50, and it is his own name on the trade licence. Not a manager who has to ask anyone.

Shawarma and grill, curry house, karak café, small Arabic kitchen. One to three branches, never a chain.

Deira, Karama, Al Quoz, Al Nahda, Al Majaz. Not the Marina and not DIFC — those are hotel outlets and franchises.

AED 20,000 to 60,000 a month, and a third to a half of it walks through a delivery app.

Runs the whole business from WhatsApp. No IT person, no marketing person, no procurement to get past.

Already pays for an aggregator listing, printed menus and boosted Instagram posts. He is not being asked to start spending — he is being asked to spend it better.

He searches “talabat commission rate”, “نسبة عمولة طلبات”, “QR menu Dubai”. Those three searches are my entire advertising plan.

THE ONE WHO TAPS · HIS CUSTOMER

Somebody who already likes the food.

18 to 40, lives here, orders from their phone. Men and women equally — this is lunch, not a niche.

Coming back, not discovering. They are not browsing for a restaurant. They already chose this one.

Will not install an app for one shawarma place. That is exactly why it opens in the browser.

About half of them read Arabic first.

Roughly **12,000** of the UAE’s 26,795 restaurants fit the left-hand column. That is the market I am counting, not all of them. *The profile is my own segmentation, not a published statistic.*

SAY THIS · 45 SECONDS · FULL WORDING IN THE SCRIPT

"Let me be exact about who I sell to, because 'restaurants' is not an answer. I sell to one man: 30 to 50, his own name on the trade licence, one cafeteria in Deira or Karama. Not the Marina — that is hotels and franchises, and they buy enterprise systems."

"20 to 60 thousand a month, a third of it through a delivery app, and he runs the whole business on WhatsApp. No IT person, no procurement — he decides in one conversation."

"And I know what he types into Google, because it is the same three things. That is my whole advertising plan."

"On the right is his customer, the one who actually taps. Coming back, not discovering — which is why it opens in a browser. Nobody installs an app for one shawarma shop."

One line if you lose the rest: 12,000 restaurants, not 26,795. You are counting the ones you can actually sell to.

MY SOLUTION

I give every restaurant its own ordering page.

01 **The customer** scans the code on the table, or opens the restaurant's link. No app to download, no account to make.

02 **The kitchen** gets one screen with today's orders. Tap an order to move it forward.

03 **The owner** gets the money page, the menu editor, and the customer list the delivery apps will never give them.

The food is eaten at the table, collected, or taken by the restaurant's own driver. I take the order. I do not drive the food.

SAY THIS · 50 SECONDS

"MyMenu gives every restaurant its own ordering page. Three people use it."

"The customer scans a code on the table. The menu opens. They order. No app to download, no account."

"The kitchen gets one screen showing today's orders. They tap to move an order from received, to cooking, to ready."

"The owner gets everything else — the money, the menu, and the customer list."

"One important thing: I do not deliver food. The customer is at the table, or collects it, or the restaurant's own driver takes it."

WHAT HE COULD BUY INSTEAD

Everything else is built for a bigger kitchen than his.

Talabat, Deliveroo	Bring him new people. Take 15–35% forever, and keep the customer's number.	NOT A RIVAL — THE PROBLEM
ChatFood	Did exactly this, in Dubai, and Deliverect bought them for it. Now sold to chains and groups.	LEFT THE GAP
Ordable	Direct ordering across the Gulf at 0% commission. Priced and shaped for the bigger operator.	THE REAL RIVAL
Foodics, POS systems	A whole till and stock system. Thousands to buy, a week to learn, someone to run it.	TOO BIG, TOO SLOW
A QR code to a PDF	Shows the menu. Cannot take an order, cannot tell him who ordered.	NOT ORDERING AT ALL
MyMenu	One branch, one price, set up in an afternoon, Arabic first. Built for nobody else on purpose.	MINE

And I am not fighting Talabat. Talabat brings new people; I keep the ones who already like the food. Most restaurants should run both — I say so on my own website.

SAY THIS · 45 SECONDS

"So why doesn't he just buy something that already exists? Here is everything he could buy instead."

"Talabat is not my rival, it is the problem — it takes a third and keeps his customer."

"ChatFood built almost exactly this in Dubai and got bought for it. That is proof, and I will come back to it. But they belong to Deliverect now, who sell to chains. Ordable is the real competitor, but it is priced for a bigger operator. Foodics is a full till system — thousands of dirhams and a week of training. And a QR code that opens a PDF just shows a menu; it cannot take an order."

"Every one of them is built for a bigger kitchen than his. I am built for nobody else on purpose."

Say the last line slowly. Then move on — do not read the table out row by row, they can read.

HOW I MAKE MONEY

300 dirhams a month. Always. No percentage.

AED 300	30 free	AED 500
Per restaurant, every month, no matter how many orders	Orders each month, so they can try it before paying	Once, if they want me to type their menu in for them

A percentage is the thing they are running away from. If I took a cut, I would start wanting their bills to be bigger — and I would become the thing they left.

SAY THIS · 40 SECONDS

"I charge 300 dirhams a month. That is it. It does not matter if they do 50 orders or 5,000 orders — the price is the same."

"The first 30 orders every month are free, so they can try it properly before they pay me anything."

"Why not take a percentage? Because a percentage is exactly what they are running away from. If I took a cut, I would start wanting their bills to be bigger. I would become the same thing they left."

WHY A RESTAURANT SAYS YES

After 20 orders a month, they are saving money.

AED 300 — my fee	Everything after this, they keep

300 dirhams is what the app would take on 1,200 dirhams of orders. At 60 dirhams a meal, that is 20 orders — less than one a day.

And my app proves it to them. The owner's screen counts up how much they saved this month. I never have to sell it twice.

SAY THIS · 45 SECONDS

"Here is the number that makes a restaurant say yes."

"300 dirhams is what the delivery app would take on 1,200 dirhams of orders. At 60 dirhams a meal, that is only 20 orders in a whole month. Less than one a day."

"After 20 orders, everything they sell, they keep."

"And I do not have to keep convincing them. When the owner logs in, the screen shows how much money they saved this month. The app sells itself every day."

THE MARKET

There are 26,795 restaurants and cafés in the UAE.

13,857 In Dubai alone	**AED 9.2B** Spent on food delivery in the UAE in 2024, growing 7% a year	**1,000** My target in three years. Under 4 of every 100 restaurants.

1,000 restaurants paying 300 a month is 3.6 million dirhams a year.

SAY THIS · 40 SECONDS

"How big is this? There are 26,795 restaurants and cafés in the UAE. Almost 14,000 of them are in Dubai."

"People spent 9.2 billion dirhams on food delivery here in 2024, and it grows about 7 percent every year. So this problem gets bigger, not smaller."

"I am not asking you to believe I will get all of them. My target is 1,000 restaurants in three years. That is under 4 out of every 100. And 1,000 restaurants is 3.6 million dirhams a year."

PROOF THIS WORKS

A Dubai company did this, and a bigger company bought them.

AED 100M	AED 30M	May 2023
Orders taken by ChatFood, a Dubai company with the same idea	Commission they saved restaurants	A company called Deliverect bought them

So this is not a guess. It works here, and buyers exist. ChatFood now belongs to a big company that sells to large chains — the small one-branch restaurant is not their customer any more. **That is the gap I am selling into.**

SAY THIS · 45 SECONDS · YOUR STRONGEST SLIDE

"You might be thinking: if this is such a good idea, why has nobody done it? Somebody did."

"A Dubai company called ChatFood built almost exactly this. They took 100 million dirhams in orders and saved restaurants 30 million in commission. In May 2023, a company called Deliverect bought them."

"That is good news for you, for two reasons. One: the idea is proven in this exact market. Two: there is already a buyer who paid for it."

"And ChatFood now belongs to a big company that sells to big chains. The small one-branch restaurant is not their customer any more. That is my gap."

WHAT I AM ASKING FOR

AED 250,000

FOR 15% OF THE COMPANY

I am not asking you to pay for the software. The software is finished — you are about to watch it work. I am asking you to pay for the one thing I cannot do alone, which is knock on 200 doors.

AED 96,000	One salesperson, for a year. About 17 restaurants a month — under one a working day.	HIRING
AED 48,000	A part-time Arabic-speaking support person. An owner who cannot get an answer cancels.	CUSTOMER SERVICE
AED 30,000	Search and Instagram, aimed at the three searches on the earlier slide. Nothing broader.	ADVERTISING
AED 76,000	Trade licence, card payments, printed table stands, hosting, and something left over for surprises.	SETUP AND RUNNING
You get 15%	Of the company, permanently — not a cut of profit for one year. At 200 restaurants that stake is worth 430,000 to 650,000 inside eighteen months.	IN RETURN

Or buy it outright: AED 750,000 for all of it — code, brand, customers — plus AED 8,000 a month to keep it running. I would rather you took the first deal, and so would you if the plan holds. My risk is selling, not software.

SAY THIS · 55 SECONDS · FULL WORDING IN THE SCRIPT

"250,000 dirhams for 15 percent. And I want to be precise about what it buys, because it is not the software — that is finished, you are about to watch it work."

"96,000 is a salesperson for a year. 48,000 is part-time Arabic support, because an owner who cannot get an answer cancels. 30,000 is advertising, aimed at the three searches I showed you. 76,000 is licence, card payments, table stands and hosting."

"You take 15 percent and you keep it — not a share of profit for one year. At 200 restaurants that is 720,000 a year, and your stake is worth 430,000 to 650,000 inside eighteen months."

"If you would rather own the whole thing: 750,000, and I stay on at 8,000 a month to run it. I would rather you took the first deal, and if the plan works, so would you."

"My risk is selling, not software. That is what your money is for. Now let me show you the app."

Why 750,000, if asked: about one year of the plan's revenue, and they are buying the upside, not the code. The 8,000 a month is a maintenance retainer — it does not promise new features.

DEMO · ABOUT 5 MINUTES LEFT

Let me show you.

01 Scan the table code — the menu opens with no app

02 Place an order as a customer

03 It appears on the kitchen screen. Move it to cooking, then ready.

04 Open the owner's page — the savings counter has gone up

Sources – commission rates: ReconcileOS 2026, onlineemenu 2026; market size: Grand View Research; restaurant counts: xMap, Restroworks; ChatFood: Caterer Middle East.

DEMO · KEEP IT TO FOUR STEPS

Do not walk through every page. Four steps only, exactly as listed. Every step here is something you already promised on an earlier slide — that is the only reason it is in the demo.

End on the savings counter going up. That is the whole pitch in one number, and it is the last thing they should see.

Do not open the menu editor, the customer list, order history, settings or the drivers page unless somebody asks. They exist, and saying "it is all there, ask me and I will open it" is stronger than spending your last two minutes clicking.

If you have time left, invite them to scan the code themselves.
