

Your 15 minutes.

Print this, or keep it open on your phone. Everything you need is on this one page.

Before you start

- 01 Open `MyMenu-Presentation.html` from your Desktop. Press **F11** for full screen.
- 02 Open your app in a **second tab**, already signed in, already on the menu page. Do not log in in front of them.
- 03 Press **N** on the slides to see the words to say. Press **N** again to hide them before you present.
- 04 The timer in the corner starts when you press the arrow key the first time.

The running order

1	0:30	Talabat didn't cook the food — your opening line . Pause after it.
2	0:40	18 dirhams gone from a 60 dirham meal. Point at the red bar.
3	0:40	90,000 a year — and they still don't know one customer's name.
4	0:45	Who you sell to . One man: 30–50, one branch, Deira or Karama, runs it on WhatsApp.
5	0:50	Your solution. Three people use it: customer, kitchen, owner.
6	0:45	What he could buy instead. All of it built for a bigger kitchen than his.
7	0:40	300 dirhams a month, flat. Never a percentage.
8	0:45	They break even at 20 orders. Less than one a day.
9	0:40	26,795 restaurants. You want 1,000 of them.
10	0:45	ChatFood did it and got bought. Your strongest slide .
11	0:55	250,000 for 15%, and what it buys. Then "now let me show you the app."
12	5:00	Demo . Four steps only. End on the savings counter.
—	2:00	Questions.

That is 8 minutes of talking, 5 of demo, 2 spare. If you fall behind, cut slide 9 down to one sentence — slide 4 already did the important half of the market argument. **Do not cut slide 4 or slide 11**. Those two are the ones you were told to cover.

The demo — four steps, nothing else

- 01 Open the customer menu. Say: *"this is what the diner sees after scanning the code on the table."*
- 02 Add two dishes to the cart and send the order.
- 03 Switch to the kitchen screen. The order is already there. Tap it through *cooking*, *ready*, and **done**.
- 04 Open the owner's dashboard. **Today's orders went 0 to 1, and the savings counter has gone up.** Stop there.

Do not stop at "ready". The savings counter only counts orders that reached *done*. If you leave the order on *ready*, today's figures move but the counter does not — and the counter is the number you are pointing at.

Do not walk through every page and every button. Your teacher said this exactly: he got lost in your last presentation because of too many features. Four steps. End on the money.

Words, in case he asks

Commission

The cut. The money Talabat keeps from every order before the restaurant gets paid. On a 60 dirham meal at 30%, Talabat keeps 18.

AED / dirham

The same thing. AED is just the short code for dirhams.

Flat fee

A price that never changes. 300 a month whether they sell 50 meals or 5,000. The opposite of a percentage.

Break even

The point where they stop losing and start saving. For you it is 20 orders a month. Below that you cost more than you save; above it, every order is profit for them.

Positioning

Where you sit next to your competitors. Yours: not fighting Talabat, but the escape from it.

The market

How many possible customers exist. Yours is 26,795 restaurants and cafés in the UAE.

Revenue

Money coming in. $200 \text{ restaurants} \times 300 \text{ dirhams} = 60,000 \text{ a month}$.

15% of the company

If he gives you 250,000 dirhams, he owns 15 out of every 100 dirhams the company is ever worth. You keep 85.

ChatFood

A Dubai company, started 2018, that built almost the same thing as you.

Deliverect

A bigger company that bought ChatFood in May 2023. This is your proof that someone pays money for this idea.

Five questions he will probably ask

“Is it in Arabic?”

Do not say yes. The layout flips to Arabic today — that part is real and you can show it live from Settings. The words are only translated in places. Say: *“The layout flips to Arabic right now, and I can show you. The words are done on the sign-in and the kitchen, not yet everywhere else. That is the next thing I build, and it is part of what the money pays for.”* He wrote your brief in Arabic, so assume he will ask.

“So what do you actually want from me — do I buy it, or do I fund you?”

Both are on the table, and say so plainly. **What you want:** 250,000 dirhams for 15% of the company, kept permanently — 96,000 for a salesperson, 48,000 for Arabic-speaking support, 30,000 for ads, 76,000 for licence, card payments, table stands and hosting. **What you will accept:** 750,000 to buy the whole thing outright, plus 8,000 a month to keep it running. Then say the honest line: “I would rather you took the first one, and if the plan works, so would you.”

“Why doesn’t Talabat just copy you?”

They cannot. The commission is their business. If they stop taking it, they have no income. That is exactly why a separate company like ChatFood could exist for five years and then get bought.

“Why would a restaurant trust a student?”

They do not have to trust me for long. The first 30 orders every month are free, so they see it working before they pay anything. And 300 dirhams is less than one day of commission for most of them.

“What if nobody buys it?”

Then I have lost your 250,000 and a year of my life. That is exactly why the money goes to a salesperson and not to writing more code. The app is already finished. I need to find out whether restaurants say yes in month two, not month ten.

If he asks something you do not know, say **“I don’t know yet, and here is how I would find out.”** He marked you up last time for asking serious questions.

Admitting a gap beats inventing a number he can check.

If you forget everything else

“Delivery apps take up to a third of every order, and they keep the customer’s details. MyMenu gives a restaurant its own ordering page for 300 dirhams a month, flat. I sell to one kind of person — the owner of a one-branch cafeteria in Deira or Karama, 30 to 50, who runs his business on WhatsApp. There are about 12,000 of them. They break even at 20 orders a month, and a Dubai company that did this got bought in 2023. I want 250,000 dirhams for 15 percent, to pay a salesperson, ads and support for a year.”

Seven sentences. That is the whole pitch. Everything on the slides is just this, slower.
